PROFESSIONAL SUMMARY

Enterprise IT Operations and Incident Management professional with 10+ years of progressive experience supporting large-scale production environments across enterprise organizations. Proven track record leading high-impact incident resolution, serving as senior escalation point (L3), and coordinating cross-functional technical teams to restore critical services within SLA targets.

Strong expertise in ITIL-aligned incidents, problems, and change management processes, executive-level communication, and stakeholder coordination during business-critical events. Experienced in driving root cause analysis, process improvement initiatives, and operational governance to enhance service reliability and reduce repeat incidents.

Recognized for translating complex technical issues into clear business impact, supporting senior leadership, and ensuring operational continuity in fast-paced environments. CompTIA A+ and ITIL Foundation certified, with a strong focus on advancing into enterprise-level Incident and Service Delivery leadership roles. Experienced supporting enterprise systems including ServiceNow ITSM environments and Banner/OCAS higher-education platforms, with a strong focus on incident resolution and operational stability.

SKILLS

- Major Incident Management (ITIL-Aligned)
- High-Severity Incident Coordination (P1/P2)
- Service Delivery & SLA Governance
- Cross-Functional Stakeholder Management
- Executive-Level Incident Communication
- Escalation Management & Bridge Call Leadership
- Operational Reporting & KPI Tracking
- Managed Service Provider (MSP) Governance
- Risk Mitigation & Business Continuity Support
- Root Cause Analysis (RCA) & Post-Incident Reviews
- Problem & Change Management
- Production Operations Support (24/7 Environments)
- IT Service Management (ITSM) Tools (ServiceNow or equivalent)
- Process Improvement & Continuous Service Optimization

TECHNICAL ENVIRONMENT

- Microsoft 365 & Azure AD (Entra ID)
- Active Directory Administration
- Windows Enterprise Environments
- Enterprise Hardware & Device Support
- DNS, DHCP, TCP/IP Networking Fundamentals
- Endpoint Deployment & Lifecycle Management
- VOIP & Collaboration Systems

WORK HISTORY

IT Operations Analyst | 2019 – Present
Tata Consultancy Services, Toronto, ON

- Serve as senior L3 escalation lead within a 3,000+ user enterprise production environment, coordinating resolution of high-severity (P1/P2) incidents to restore critical business services within SLA targets.
- Lead cross-functional incident bridge calls involving infrastructure, network, application, and managed service teams, maintaining ownership through full resolution.
- Provide clear incident updates to business stakeholders and leadership during business-critical outages, clearly translating technical impact into business terms for senior leadership.
- Govern end-to-end incident lifecycle using ITIL-aligned practices (ServiceNow), managing 250+ monthly incidents while ensuring SLA compliance and documentation accuracy.
- Conduct root cause analysis (RCA) on recurring production issues and drive corrective action plans to reduce repeat incidents and improve service stability.
- Support operational readiness for executive meetings and critical business events, ensuring continuity of collaboration platforms, connectivity, and presentation systems.
- Administer identity and access management (Active Directory & Microsoft 365) in alignment with enterprise security policies and compliance standards.
- Collaborate with network teams on DNS, DHCP, TCP/IP, and connectivity investigations impacting enterprise users.
- Contribute to process improvement initiatives enhancing incident triage efficiency and reducing resolution times.
- Participate in 24/7 on-call rotation, supporting enterprise operational continuity and rapid escalation management.

IT Operations Team Lead / Service Delivery Coordinator | January 2019 – November 2019
K Mobile – Toronto, ON

- Led a team of 12 IT analysts within a high-volume enterprise environment, providing senior escalation support for high-impact (P1/P2) incidents and ensuring timely restoration of critical services.
- Oversaw incident and service request management using ITIL-aligned practices, ensuring SLA adherence, effective prioritization, and operational accountability across technical teams.
- Served as primary escalation point for complex technical issues spanning Windows OS, Microsoft 365, VOIP, and enterprise hardware, translating technical challenges into clear business impact for leadership.
- Coordinated cross-functional resolution efforts with internal IT teams and external vendors to restore service continuity during high-severity incidents.
- Drove process improvement initiatives to enhance incident triage efficiency, reduce repeat incidents, and improve overall service delivery quality.
- Managed operational readiness for business-critical events, ensuring collaboration systems, VOIP platforms, and endpoint environments were fully functional.
- Developed and maintained technical documentation, knowledgebase resources, and standardized procedures to improve team efficiency and consistency.
- Mentored and coached analysts on troubleshooting best practices, business communication, and ITIL-compliant incident management.
- Monitored key service metrics and performance indicators, implementing corrective actions to strengthen SLA compliance and operational governance.

BUSINESS SYSTEMS & INFORMATION SECURITY OFFICER | November 2017 – January 2019
Durham College – Oshawa, ON

- Supported and maintained the Ellucian Banner Student Information System (SIS) and integrated OCAS admissions platform within a live production environment, ensuring system availability, data integrity, and operational continuity.
- Acted as functional application owner for multiple integrated modules, overseeing configuration, validation, and performance optimization to support institutional operations.
- Governed daily automated data integrations between internal platforms and external partners, proactively monitoring file transfers, resolving synchronization failures, and safeguarding data accuracy.
- Investigated and resolved complex data integrity issues (duplicate records, integration conflicts, processing errors), conducting structured root cause analysis to prevent recurrence.
- Served as liaison between academic/business departments and IT technical teams, translating operational requirements into technical solutions and ensuring end-to-end resolution of system defects.
- Generated executive and operational reporting using Cognos and advanced Excel analytics, enabling data-driven decision-making and system performance oversight.
- Drove process improvement initiatives that enhanced data quality, reduced manual interventions, and improved system efficiency across departments.
- Delivered structured user training sessions and developed system documentation to improve adoption, reduce input errors, and standardize platform usage.
- Ensured compliance with institutional data security and confidentiality standards when handling sensitive student and personal information.

IT SERVICE DESK MANAGER / OPERATIONS LEAD March 2015 – November 2017
Nissan Canada – Toronto, ON

- Managed a corporate service desk team, providing senior escalation support for high-impact incidents across multiple departments, ensuring rapid resolution of business-critical issues.
- Oversaw incident and service request management using ITIL-aligned processes, including prioritization, escalation, and SLA compliance tracking.
- Acted as primary escalation point for complex technical and connectivity issues, translating technical impact into actionable business context for leadership.
- Coordinated cross-functional resolution efforts with internal IT teams and external vendors to implement sustainable solutions and prevent recurring incidents.
- Delivered operational guidance, mentoring, and coaching to junior analysts, enhancing troubleshooting effectiveness, customer communication, and adherence to ITIL best practices.
- Developed and maintained technical documentation and knowledgebase resources to standardize support procedures and improve service delivery efficiency.
- Monitored service desk performance metrics and user feedback, initiating process improvement initiatives that increased SLA compliance, reduced repeat incidents, and enhanced end-user satisfaction.

- Supported hardware lifecycle management in alignment with IT security policies, including secure data handling and compliant asset disposition.
- Ensured operational readiness and continuity of corporate systems, including collaboration platforms and VOIP infrastructure, to minimize business disruption.

EDUCATION

PARUL University 2008 - 2012
Bachelor of Science in Computer Science
Durham College - 2014 – 2015
Project Management
Durham College - 2015 – 2016
Information Systems Security, Computers and Network
